

Planetarium, page 1

Today I went to the Planetarium with the class. First, a man came to tell us what was going to happen. Then the room got dark and I couldn't see anything. All of a sudden, planets started to show up. There was a really big Planet. We blasted up into the Milky Way. We saw stars, planets, and nebulas. It was amazing to see things so close up!

I learned a lot. I didn't know that there is a star that is bigger than the planet Jupiter. I also learned just how big the Milky Way is and how small Earth is. I also learned about black holes. I still want to know what is at the end of the black hole, and what happens when you go into the black hole.

I really liked when we went towards Jupiter. It looked like we were going to crash into Jupiter but we just orbited around it. Next, we saw two astronauts that were having fun on the moon. This made me want to go to the moon too.

It was a cool and fun field trip and I am glad my class got to go!
